Red tides can impact human and animal health, the National Ocean Service helps resource managers and coastal visitors plan ahead.
The Harmful Algal Bloom OPERATIONAL FORECAST SYSTEM (HAB-OFS) Assists the mitigation of impacts caused by Gulf of Mexico HABs (or “red tide”) through early bloom detection and forecasts.

NOAA’s Center for Operational Oceanographic Products and Services (CO-OPS) turns operational oceanographic data into meaningful information for the Nation.

For more information or to subscribe to the NOAA HAB Bulletin, please scan QR code:
